Version: V1.6 Date: 2019.8.20

Description

OVP-L1X is a video processing equipment developed for LED large screen, showing and rental, conference room, studio and other markets. This product adopts HD image processing technology which specially designed for small spacing LED display screen. It can realize point-to-point input and output for large HD resolution LED screen, so it can effectively eliminate the phenomenon of edge saw tooth caused by image amplification, and reduce the out-of-focus blur feeling of image after amplification. OVP-L1X integrates four-channel Gigabit network port output, combining conventional video processor and sending card into one, which not only improves the reliability, but also brings great convenience for remote maintenance of LED display screen. At the same time, with the function of U disk, especially suitable for exhibition.
